

Thermal Pads[Request Quote](#)

This dry pad is placed under the relay. When the relay is activated, the relay's heat changes the dry pad into the thermal grease. Quick, easy, clean. Just the "right amount" of thermal grease. Ask for part number THERMAL-PAD-005 (for 5 pieces) or -025 (for 25 pieces).

Purchase these pads to easily and properly mount your new solid state relays on existing or new heatsinks. These pads can be used to properly mount any industry standard solid state relay regardless of manufacturer.
